Infectious Disease Control - The Wastewater Worker

On behalf of the CSRMA Workers' Compensation Committee, we would like to present you with a free training video on infectious disease control in a wastewater environment.

This video was produced by the City of Los Angeles and provides information *specific to the wastewater industry* on controlling bloodborne and waterborne infectious diseases.

We believe this video will help answer questions your employees may have regarding the risk of contracting various diseases from working near wastewater and biosolids.

We also hope this video will help you comply with CCR Title 8 Section 5193(g)(2)(B), which requires you to provide training on bloodborne pathogens and infectious disease control to employees at risk of exposure according to the following schedule:

1. At the time of initial assignment to tasks where occupational exposure may take place;
2. At least annually thereafter.

Should you have any questions, please contact David Patzer at
